

# Scientists Helping Scientists™

STEMCELL Technologies is Canada's largest biotechnology company. Headquartered in Vancouver B.C., and with a team of over 1,500 employees, STEMCELL is driven by science and a passion for quality.

Our team provides over 2,500 cutting-edge products to leading researchers around the world. We are a proudly Canadian-owned and operated company and committed to ensuring that the future of global regenerative medicine is grounded in Canadian innovation.

The STEMCELL Technologies team is growing rapidly; in fact, we are on track to bring an additional 3,500 knowledge-based, full time jobs to Canada by 2030 – many of which will be based out of our new campus presently under construction in Burnaby, B.C., funded in part by a partnership with the governments of Canada and British Columbia.

Construction is underway for STEMCELL's new centralized campus, which will feature an Advanced Biologics Manufacturing Facility that includes labs and a global distribution centre, along with extensive office space.
